Summary

- Full-stack blockchain developer building frontend/backend integration with smart contracts on the EVM
- Proven experience contributing to successful blockchain projects in languages such as Solidity, Rust, Go, Python, JS/TS
- Two-time hackathon winner and a shameless member of the Rust cult

Skills

- Languages & Tools: Solidity | Rust | Python | C | TypeScript | JavaScript | Go | Vite | Foundry | Hardhat | Web3.js
- Web Development: React | Next.js | Node.js | Nest.js | PostgreSQL | Django | HTML/CSS | REST APIs | ExpressJS | FastAPI
- Blockchain: Smart Contracts | EVM | ERC Standards | EVM Security | Gas Optimization | DeFi | Security Audits
- Cloud & DevOps: AWS (ECS, Lambda, Batch, S3, CloudFront, ACM) | Docker | Terraform | Cloudflare | Infra-as-Code

Professional Experience

Co-Founder & Lead AI/ML Engineer, Color Brain

05/2026 - Present

- Leading the technical development of an AI/ML decision-support platform for textile coloration.
- Designed an ML system combining historical retrieval, CIEDE2000 color science with calibrated confidence scoring.
- Built the product stack, including a Python inference API, Rust/WASM operator application, and AWS infrastructure

Rust Software Engineer, OBOX

02/2026 - Present

- Developed Rust-based software across blockchain and systems projects, including smart contracts and native plugins.
- Designed smart-contract systems for tokenized property leasing, including escrow, treasury, and lease lifecycle logic.
- Built a cross-platform native plugin integrating C/C++ systems through FFI, with macOS/Linux build/packaging workflows.

Full-Stack Blockchain Developer, cryptoart.com

02/2025 - 06/2026

- Lead developer of upgradeable ERC-721 NFTs implementing ERC-7160 using **Solidity** and **Foundry**.
- Led **audits**, identified critical vulnerabilities, and shipped secure Ethereum **Mainnet** deployments.
- Built production-ready frontend with **React** and **Vite**, integrating smart contracts and **RESTful APIs**.
- Designed and deployed a **NestJS** backend with **PostgreSQL** on **AWS** ECS, CloudFront with **Terraform**.

Full-Stack Developer, contractor

08/2023 - 01/2025

- Engineered production-grade **smart contracts** using **Solidity** and **Hardhat** for unit/integration testing
- Develop **RESTful APIs** with **Go** and built **MongoDB**-based indexing service for blockchain events
- Integrated **Web3.js** and Ethers.js libraries with **Next.js** frontend and **FastAPI** to synchronize blockchain data

AI Software Engineer Internship, Polaris

02/2023 - 06/2023

- Achieved a **99%** accuracy rate in defect detection by designing **OpenCV** computer vision algorithms using **YOLOv3**
- Optimized **neural networks** on **CUDA**, resulting in a **30% improvement** in processing speed
- Maintained and updated software tools in **C++** and **Python**, ensuring high performance in object detection applications

Projects

Hackathon Winner - Funding Rate Arbitrage for Crypto Futures Market

- **1st Place Winner** of the Scaling Web3 Hackathon presented by Orderly Network and Encode. Link to [Github](#)

Education

- | | | |
|---|---------------|--------------------|
| • Intensive Coding Bootcamp | Encode | Completed Aug 2022 |
| • Bachelor of Science in Engineering
Major in Mechanical Engineering | UNC Charlotte | Completed May 2012 |
